SUMMARY

Senior full-stack engineer with 10+ years shipping production Laravel and Vue systems across fintech, payments, e-commerce and analytics. Currently Tech Lead at **Keyapp**, a 9-year-old app-store-optimisation SaaS with 120,000+ clients in 30+ niches and coverage across 200+ regions, where I designed the event-driven ingestion that **scaled ClickHouse inserts from 1M to 124M rows/day** (~20 TB daily traffic) on Laravel + RabbitMQ + ClickHouse + Redis.

Built the engineering team from zero (CTO and me) to a steady five, owning architecture, code review and hiring. Comfortable end-to-end — backend system design, Vue 3 + TypeScript front-end, schema and query work, queue tuning, infra. Ex-fintech: payment integrations for one of Ukraine's largest banks via **XPAY**, wallet backend at **KoshelOK**. Outside tech, I served two years in the Ukrainian Marines (2016–2018) and compete in triathlon — both habits I lean on when production gets noisy.

SELECTED HIGHLIGHTS

- Built and lead the Keyapp engineering team from 0 → 5 (1 FE, 1 BE, 1 QA + me as Tech Lead, alongside CTO).
 - Architected a Laravel + RabbitMQ + ClickHouse + Redis pipeline; **scaled inserts from 1M → 124M rows/day** (~20 TB daily traffic) on a 9-year-old product serving 120K+ clients.
 - Designed the team's front-end domain-driven architecture (Vue 3 + TypeScript + Pinia, 32 domain modules — each with its own aggregate, store, repositories and types); migrated 30+ legacy modules to the new pattern.
 - Wrote Docker stacks from scratch for both Keyapp products and built the CI/CD pipeline end-to-end (GitLab → Bitbucket Pipelines, zero-downtime deploys, per-env templates).
 - At Med-service: designed an internal business-process automation project; **chosen as best project by company-wide vote, awarded a company diploma**.
 - At XPAY: built payment-integration code for an acquirer working with one of Ukraine's largest banks.
 - Bitrix Architect for a national pharmacy chain; built two production sites (online-apteka.com.ua, apteka-med-service.ru) plus the corporate portal.
 - Ten different employers / clients in 10+ years — full range across PHP, Laravel, Vue 3, TypeScript, MySQL, PostgreSQL, ClickHouse, Redis, RabbitMQ, Docker, Kubernetes.
-

EXPERIENCE

Keyapp · Tech Lead / Full-Stack Developer

May 2022 — present · Kyiv (remote-friendly) · keyapp.top

App-store-optimisation SaaS — keyword installs, ratings and analytics across Google Play and the App Store; 120K+ clients, 30+ niches, 200+ regions. I own engineering across **two products** in the Keyapp portfolio.

- Tech Lead and Team Lead. Built the engineering team from zero to a steady five (1 FE, 1 BE, 1 QA + me; alongside CTO). Run code review, hiring loops and onboarding.
- Designed the new platform architecture and led the migration off the legacy version.
- Designed event-driven ingestion on **Laravel + RabbitMQ + ClickHouse + Redis**; **scaled ClickHouse inserts from 1M to 124M rows/day** (~20 TB daily traffic).
- Built a **Node.js WebSocket notification layer** (Pusher-style) so dashboards push real-time updates without polling.
- Designed and rolled out a **domain-driven Vue 3 + TypeScript + Pinia front-end architecture** — 32 domains, each with its own aggregate, Pinia store, repositories, interfaces and utils. Migrated 30+ legacy modules; the canonical reference module is the standard the team writes new pages against.
- Wrote and own the **Docker** configuration for both products end-to-end — multi-service stack (nginx, PHP, MariaDB, Redis, ClickHouse, supervisor) + **Kubernetes** for orchestration. **Grafana + Loki** for metrics and log aggregation.
- Built the **CI/CD pipeline from scratch** — first on GitLab, later migrated to **Bitbucket Pipelines** with **zero-downtime deploys**, environment templates per dev/live/prod, and a one-time server-provisioning script.
- Designed multi-threaded worker patterns with lock-based concurrency (RabbitMQ + DB locks) for safe parallel batch ingestion.
- Pair weekly with CTO and product on roadmap and trade-offs; own all major architecture calls.
- Stack: **Laravel 9 + Vue 3 + TypeScript + SCSS + Webpack + MySQL + Redis + ClickHouse + RabbitMQ + Docker + Kubernetes + Node.js**; ops via Jira / Confluence / Bitbucket.

KoshelOK · Full-Stack Laravel Developer

Feb 2022 — May 2022 · Kyiv · koshelok.ua

Lending / wallet fintech (consumer credit).

- Joined to build the new product on **Laravel + Vue.js + MySQL + Webpack**.
- The full-scale invasion of Ukraine started a couple of weeks into the engagement. Relocating abroad and handling legalisation made it impossible for me to focus on work, so I had to wind the contract down early.

XPAY GROUP · Full-Stack PHP / Yii2 Developer

May 2021 — Jan 2022 · Kyiv

Payment platform; the acquirer integrated with one of Ukraine's largest banks.

- Built and maintained payment-integration code primarily on **Yii2** (~90% of the work), with PostgreSQL + MySQL + jQuery; Laravel was about 10% of the codebase.
- Joined hoping for Laravel work; closed essentially all assigned Yii2 tickets and then left to focus on Laravel-only roles.

ClickDealer · Mid PHP Developer

Feb 2021 — Mar 2021 · Dnipro · short engagement

- Worked on internal portal features in **Silex**.

Med-service (national pharmacy chain) · Bitrix Architect

Feb 2019 — Feb 2021 · Dnipro · 2 years (full-time)

Bitrix-based corporate portal and B2C online pharmacy chain.

- Co-rolled out a new platform version with one colleague — owned the larger share of architecture and module work.
- Re-designed the company's business-process workflows on the Bitrix corporate portal.
- Maintained and extended the e-commerce store **online-apteka.com.ua**.
- Built the **apteka-med-service.ru** visit card on **WordPress** — theme written from scratch plus custom plugins. Hit **100 / 100** on both Mobile and Desktop in PageSpeed Insights at the time.
- Designed an internal business-process automation project; **chosen as the best project by company-wide team vote, awarded a company diploma**.
- Optimised MySQL queries and added caching to keep the portal responsive at scale.

karbosnab.com · Full-Stack Developer

Feb 2019 — Jan 2021 · 2 years (part-time, in parallel with Med-service)

Built an e-commerce store from scratch.

- Frontend: vanilla JS, Gulp, SASS, HTML, Photoshop assets.
- Backend: PHP 7.4, Laravel 7, MySQL, Ubuntu.

WizardsDev · PHP Developer

Oct 2018 — Dec 2018 · Dnipro

Worked inside the frontend team on PHP plugins and widgets across ~10 finance/forex sites: maximarkets.org, eland.kiev.ua, finprotect.info, birzha.name, forex-helper.ru, top-technology.com.ua, globalcloudteam.com, fx-strategy.info, business-opportunities.com.

Freelance · Web Developer

Jun 2018 — Dec 2018

Various small PHP fixes.

Ukrainian Marines (ВМС України) · enlisted service

Oct 2016 — Jun 2018 · Mykolaiv · 1 year 9 months

Freelance · Back-end PHP Developer

Mar 2014 — Aug 2016 · Dnipro

PHP, CSS, JS, HTML, Yii1. Projects: enjoy-ukraine.com, lumberjack.style, moscowteslaclub.ru.

Rechout · Junior C# Developer

Feb 2015 — Mar 2015 · Dnipro · short engagement

Catalogue project: C# + Web API + SQL + Angular + JSON + Ajax + MVC.

STACK

Backend Laravel 9, PHP 8.2, REST API design, queue + worker patterns, multi-threaded workers + lock-based concurrency, OOP / SOLID / DRY / PSR-12, design patterns **Testing** PHPUnit (PHP), Jest (JS / TS / Vue), TDD **Frontend** Vue 3, TypeScript, SCSS, Webpack, BEM, Mobile-first **Real-time** Node.js (WebSockets, Pusher-style notifications) **Data** MySQL, MariaDB, PostgreSQL, ClickHouse, Redis **Messaging** RabbitMQ **Infra & DevOps** Docker (write configs from scratch), Kubernetes, nginx, supervisor, GitLab CI, Bitbucket Pipelines, zero-downtime deploys **Observability** Grafana, Loki **Tools** Git, Jira, Confluence, Bitbucket **Past / occasional** Bitrix, Yii1, Yii2, Silex, jQuery, WordPress, OpenCart, C#, .NET

EDUCATION

- **GoIT** — JavaScript & web fundamentals (HTML, CSS, JS modules) · 2018–2019
 - **Mykolaiv University** — Bachelor in Finance & Credit · 2013–2015
 - **Mykolaiv University** — Associate in Accounting & Audit · 2010–2013
 - **STEP IT Academy** — Computer Programming · 2010–2015 (5-year part-time programme)
-

English (intermediate · technical, conversational improving) · Ukrainian (native) · Russian (fluent)

PERSONAL

Triathlon. Reading (currently re-reading Carnegie). Ukrainian Marines 2016–2018. Two of my proudest small wins: a calculator I wrote at STEP that years later got me hired, and an internal automation project at Med-service that my colleagues voted as the best project of the year.
